The National incentive scheme (Feed In Tariffs) is a 25 year scheme (from April 2010) that pays you for every unit of electricity you generate even though you get to use it for free, cutting your yearly bills while receiving quarterly payments for the total electricity you generate.

What are my likely returns?

Expected returns are 8-10% per annum (tax free on domestic properties) and all payments are index linked so your earnings rise in line with inflation, the savings on your electricity bills will increase too as the cost of electricity is almost certainly going to rise from the power companies.

Do solar panels work in the UK?

Yes, solar panels are powered by daylight, not heat. In years to come solar panels will be as common place as satellite dishes. Germany with a climate similar to ours is years ahead in renewable energy from solar PV production on homes.

Reasons to invest in solar PV panels:

- GENERATE TAX FREE INCOME FROM YOUR PROPERTY
- CUT YOUR ELECTRICITY BILLS
- REDUCE YOUR CARBON FOOTPRINT
- PROTECT YOURSELF FROM PRICE RISES
- ADD VALUE TO YOUR HOME

Some companies are offering to fit solar PV panels for free, this is because they know they can make a good profit from your roof over 25 years. WHY LET THEM MAKE MONEY FROM YOUR PROPERTY.
